

Pablo Eduardo Garcia-Nieto

✉ paedugar@gmail.com  [pablo-gar](#)  [paedugar](#)  [pablo-gar](#)

Education

- | | |
|---|------------------------------------|
| Ph.D. Stanford University , Biology (Molecular, Cellular and Developmental) <ul style="list-style-type: none"> • Advisors: Hunter Fraser and Ashby Morrison • Strong computational component | Stanford, CA
2015 – 2020 |
| B.Sc. National Autonomous University of Mexico (UNAM) , Genomics <ul style="list-style-type: none"> • Graduated with university honors • Advisor: Jean-Philippe Vielle-Calzada | Mexico City, Mexico
2009 – 2013 |

Experience

- | | |
|--|--|
| Anthropic , Member of Technical Staff <ul style="list-style-type: none"> • Applied AI for life sciences. | New York, NY
June 2026 – present
4 months |
| Biohub , Staff Data Scientist <ul style="list-style-type: none"> • Technical lead for the Billion Cells Project, supporting labs processing millions of single-cell transcriptomic profiles. • Worked directly with partner labs to support computational biology needs, mentoring scientists and helping design analyses and experimental strategies. | New York, NY
Oct 2025 – May 2026
8 months |
| insitro , Senior Data Scientist <ul style="list-style-type: none"> • Created re-usable analytical pipelines for single-cell gene expression data in close partnership with engineers and machine learning scientists. • Iterated rapidly with wet-lab teams to refine experimental strategies and integrate computational insights into decision-making for clinical programs. | San Francisco, CA
Oct 2024 – Oct 2025
1 year 1 month |
| Chan Zuckerberg Initiative , Computational Biologist and Product Manager <ul style="list-style-type: none"> • Developed and prototyped algorithms for processing and analysis of single-cell data. Collaborated with engineers to bring methods to production for 1000+ datasets. • Defined, developed, and launched single-cell software products. Led a team of engineers and UXR to deliver CELLxGENE Census for large-scale modeling use cases. | Redwood City, CA
Oct 2020 – Sept 2024
4 years |
| Fraser and Morrison Labs, Stanford University , Ph.D. Researcher <ul style="list-style-type: none"> • Pioneered computational methods to study somatic mutation landscape using 10,000+ sequencing samples from 500+ individuals. • Integrated genomics, transcriptomics, and phenotypic data to uncover mechanisms of somatic mutation acquisition. • Developed sequencing technologies to map UV-induced DNA lesions genome-wide. | Stanford, CA
Sept 2015 – Oct 2020
5 years 2 months |
| Morrison Lab, Stanford University , Research Assistant <ul style="list-style-type: none"> • Developed a novel sequencing technique to map UV-induced DNA lesions. • Integrated melanoma mutation data with epigenomics data to characterize carcinogen susceptibility. | Stanford, CA
June 2013 – Aug 2015
2 years 3 months |
| Vielle-Calzada Lab, LANGE BIO , Computational Biologist <ul style="list-style-type: none"> • Applied functional genomics and computational biology to investigate sexual development in plants. • Processed and analyzed small-RNA sequencing data from plant ovules. | Irapuato, Mexico
2011 – 2012
1 year |

Awards

Bio-X Ph.D. Fellowship

2016

- Awarder: Stanford Bio-X
- Full funding for Ph.D. studies given to students with academic excellence and interdisciplinary projects.

Coca-Cola Fellowship for Research Abroad

2013

- Awarder: Coca-Cola Foundation
- Given to outstanding undergraduate students from Latin America to perform research in the USA or Europe.

Honors in B.Sc. Thesis

2013

- Awarder: UNAM
- Given to students who achieved a GPA greater than 3.7 and were assessed as producing high-quality research.

Gold Medal, iGEM Synthetic Biology Competition

2010

- Awarder: MIT / iGEM
- Given to excelling competitors that contribute with an impactful project in synthetic biology.

Skills

Computational: Python, R, single-cell and bulk RNA, variant calling and eQTLs, Snakemake/Nextflow, Bash, HPC clusters (SLURM/Torque), FACS analysis.

Experimental: Human tissue culture, Western/slot blots, Transfection and infection, FACS, Electrophoresis, qPCR, DNA labelling, Immunofluorescence, Classical and topo cloning.
